

OVERPRESSURE RELIEF VALVE

(WFH - 30 / 60 / 120)

- Excellent operational characteristics.
- Easy to clean surface.
- Anti-corrosive parts (stainless steel, AISI 304 y 316)
- High evacuation capacity, 120 l / min.
- Low level of noise at high pressure.
- Easy to assemble.
- Models come in three sizes, 30, 60 y 120 lpm.

THE RELIEF VALVE IS USED TO PROTECT A SYSTEM'S COMPONENTS FORM A SURGE AS RESULT OF A PRESSURE PEAK.

Furthermore, the valve is designed to control / limit pressure in a system by draining the excess water from the pump unit, and sending it back to the main supply tank.
